INTRODUCTION

The tables in this publication represent the first wave of data available from the 1980 Census of Population and Housing. These 59 tables of information were compiled by the Census Bureau from the Census questionnaire sent to all households in the U.S., and are therefore referred to as "complete count" or 100% data. A sample of 19% of the population received a longer questionnaire containing questions on income, employment, handicap status and other areas not covered by the complete count questionnaire. (See p. 13 for a listing of both complete count and sample data items.)

Data from the 1980 Census will be presented in extensive cross-tabulations on 5 computer files, called "Summary Tape Files," or STF 1 through 5. STF 1 contains 59 tables of complete count data, which are presented in the following pages for the 351 cities and towns and 14 counties in Massachusetts. These 59 tables of data are the same for all states (as are all the Summary Tape Files) and are available at many different levels of geography - block, tract, city or town, SMSA, state, etc. STF 2 consists of 132 tables of more detailed complete count data, and STF's 3, 4 and 5 all contain sample data. At the date of this publication (June 1982) only STF 1 had been released as yet for Massachusetts.

The actual printed pages reproduced here are microfiche "blowbacks" - enlarged hard copy of the microfiche version of STF 1. (Note that all 59 tables of data fit on two pages; hence, every city and town has two pages of information.)

About the Center for Massachusetts Data

The Center for Massachusetts Data is part of the Census Bureau's State Data Center program. Since the 1970 Census of Population and Housing, 46 State Data Centers have been formed in response to public demand for greater access to census data. The Center acts as a repository for standardized information on population, housing, economic activity, transportation and the operation of local government in Massachusetts. As such, it houses both printed and computerized data from the Census of Population and Housing, the Economic Census, the Census of Agriculture and the Census of Government. More importantly, the Center also does extensive processing of the computerized data supplied by the Census Bureau to make it more readily available to all citizens. In addition to preparing data for online access and producing standard reports, the Center also does special aggregations and tabulations on a low fee-for-service basis.

FOOTNOTE SECTION

01 The count of households in the complete-count tabulations by definition equals the number of occupied housing units. For this documentation the term "Household" is used unless the matrix is stratified by a housing item such as tenure, plumbing facilities, etc., in which case, the term "Occupied housing unit" is used.

02 Vacant seasonal/migratory units are excluded from all other tabulation matrices.

03 For data tabulated on a 100-percent basis, includes all persons in the category "Other." For data tabulated from the sample, excludes those persons who have a write-in entry of an Asian and Pacific Islander group in the "Other" category.

04 "Asian and Pacific Islander," in the 100-percent tabulations, includes "Japanese," "Chinese," "Filipino," "Korean," "Asian Indian," "Vietnamese," "Hawaiian," "Guamanian," and "Samoan." "Asian and Pacific Islander," in sample tabulations, includes the groups listed above and those persons who have a write-in entry of an Asian or Pacific Islander group in the "Other" category.

05 Relatives include householder, spouse, and the questionnaire categories: "Son/daughter," "Brother/sister," "Father/mother," and "Other relative." Tabulations of "Other relatives" include all categories not shown separately in the matrix.

06 "Nonrelatives" include the questionnaire catagories: "Roomer, boarder," "Partner, roommate," "Paid employee," and "Other nonrelative." Tabulations of "Nonrelatives" include all categories not shown separately in the matrix.

07 Tabulations of "Persons in household" based on 100-percent data by definition are the same as tabulations of "Persons in unit." The phrase "Persons in household" is used unless the matrix is stratified by a housing item such as tenure, plumbing facilities, etc., in which case, the phrase "Persons in unit" is used. Tabulations of "Persons in household" and "Persons in unit" based on sample data are not necessarily the same because of differences in the procedures used to inflate sample population and housing data.

08 A "Child of householder" includes any son, daughter, stepchild, or adopted child of the householder. An "Own child of householder" is a never-married child under 18 years of age who is a son, daughter, stepchild, or adopted child of the householder. "Related children" include not only own children but also all other family members, regardless of marital status, who are under 18 years old, except the householder or spouse. Foster children are included in the "Nonrelative" category.

09 Vacant housing units include the questionnaire categories: "For rent," "For sale only," "Rented or sold, not occupied," "Held for occasional use," and "Other vacant." Tabulations of "other vacants" include all categories not shown separately in the matrix.

10 This aggregate, along with the relevant count, will permit the computation of a mean. For example, the aggregate value for specified owner-occupied noncondominium units will yield the mean value when divided by the count of specified owner-occupied noncondominium units, and the aggregate rooms for occupied and vacant year-round units divided by the count of occupied and vacant year-round units yields mean rooms. (See footnote 14 prior to computing mean value or price asked).

11 Value and price asked are tabulated separately for noncondominium and condominium units.

The noncondominium value distribution is restricted to certain kinds of "owner-occupied" units; the noncondominium price asked distribution is restricted to certain kinds of "vacant-for-sale only" units. The following are excluded from the tabulations on value and price asked for noncondominium units:

a. Units at an address with two or more units
b. Units on 10 or more acres
c. Units with a commercial establishment or medical office on the property
d. Mobile homes or trailers

The condominium value distribution is tabulated for all "owner-occupied" condominium units; the condominium price asked distribution is tabulated for all "vacant-for-sale only" condominium units.

12 Contract rent is tabulated for all "renter-occupied" units except one-family houses on a property of 10 or more acres. Rent asked is tabulated for all "vacant-for-rent" units except one-family houses on a property of 10 or more acres. Units tabulated in the "No Cash Rent" category are all occupied housing units reported as "No Cash Rent" except one-family houses on 10 or more acres.

13 Lacking complete plumbing (facilities) for exclusive use includes: Complete plumbing (facilities) but also used by another household, some but not all plumbing facilities, or no plumbing facilities.

14. Multiply the aggregate value and price asked by $250 to obtain the true value or price asked. The tabulation was scaled by a factor of $250 for tally purposes.

15. Allocations of marital status for persons under 15 years old are not allocated in "Persons with one or more items allocated."

16. "Year-round housing units with one or more housing items allocated" includes allocations of "Units at address," "Access," "Plumbing facilities," "Rooms," "Tenure," "Condominium Status," "Acreage of property," "Commercial establishment or medical office," "Value" or "Price asked," "Contract rent" or "Rent asked," "Vacancy indicator," "Vacancy status," "Boarded up status," and "Duration of vacancy."

GLOSSARY

ALLOCATION AND SUBSTITUTION

Allocation and substitution are techniques used by the Census Bureau to fill in missing data or to replace unacceptable or conflicting data on the computerized record of a questionnaire. Allocation is used to fill in missing or unacceptable items for a person or housing unit; substitution is used when persons or housing units are known to exist but their records are missing. When a record for a person or housing unit is missing or an item is unacceptable, the computer assigns (or "substitutes") a value for that item by looking up the value of the same item or the most recently processed person or housing unit with the same general characteristics. When a record for a known person or housing unit is entirely missing (for example, when a household reports five members and only answers the questionnaire for four), the computer assigns or "allocates" a full set of items for the missing person or housing unit from previously processed records. Allocation may introduce bias if, on the average, the characteristics of nonrespondents differ from those of respondents. Users should be particularly aware of substitution and allocation at the smaller geographic levels.

BLOCK

The smallest unit of census geography. Blocks average about 70 people, and are usually small rectangular areas bounded by four streets. Most SMSA's are subdivided down to the block level. In addition, cities and towns over 10,000 population and with grid-like street patterns are often blocked.

BLOCK GROUP

Groups of blocks averaging approximately 1,100 in population. Block groups are the next lowest level of geography for both tracts and BNA's. (See below.)

BLOWBACK

Enlarged hard (paper) copy of microfiche. The tables in this book are blowbacks of STF 1.

BNA

Block Numbering Area. Unit of geography roughly comparable to tracts (See TRACT, below) for areas which are blocked but not tracted.

CCD

Census County Division. Statistical areas defined in the twenty states in which MCD's (See MCD, below) are not legally defined, are not well known, or have frequent boundary changes. (Not applicable to Massachusetts.)

COMPLETE COUNT/100%

Data derived from the questionnaire sent to all households in the U.S. for the 1980 Census of Population and Housing. Complete count data consists of detailed population and housing characteristics only, such as age, sex, race, family structure, tenure, rent, plumbing facilities, etc.

EEO FILE

Equal Employment Opportunity File. Special Summary Tape File with both occupational and years-of-school-completed data cross-tabulated by race, Spanish origin and sex. The data will be available for counties, MCD's over 50,000 in population and SMSA's. This data may also be produced in microfiche, with a national level printed report.

ENUMERATION DISTRICT

The smallest unit of census geography in non-metropolitan areas that are not divided into blocks. The average ED is about 600 people.

FAMILY

Two or more persons, including the householder (see below), who are related by birth, marriage or adoption, and who live together as a household.

HOUSEHOLD

The person or persons occupying a housing unit. Totals of "Household," "Householders" and "Occupied Housing Unit" are always identical in complete count data.

HOUSEHOLDER

Person in whose name the home (household) was owned or rented. If there was more than one person or no person in this category, any adult person (over 15 years) who was not a roomer, boarder or paid employee was to be reported as "Householder."

HOUSING UNIT

A house, apartment, mobile home or trailer, group of rooms or single room occupied or intended for occupancy as separate living quarters. Separate living quarters are those in which the occupants do not live and eat with any other person in the structure, and which have direct access from the outside of the building or through a common hall.

MICRODATA (Also: Public-Use Microdata Samples)

Microdata consists of untabulated, actual questionnaire responses from individual households. Instead of totals for different geographic areas, each record contains all of the data collected for each person in a household. A small sample of unidentified household records will be made available on computer tape. These "Public-Use Microdata Samples" have all identifying information removed from the sample records to insure confidentiality; in general, it is only possible to identify the state or county of a Public-Use Microdata Sample. Because these files contain unaggregated data, users can tabulate or summarize them in any way they choose.

MCD

Minor Civil Division. Political subdivisions of counties in thirty states, including Massachusetts. The 351 cities and towns of the Commonwealth are all MCD's.

RACE

Self-identification by respondents as belonging to one of seven race categories: White, Black, American Indian, Eskimo, Aleut, and Asian and Pacific Islander. (This latter category is further divided into nine subcategories.) Note that "Spanish origin" is not a race category; see below.

SAMPLE DATA

Data derived from the long questionnaire sent to approximately 19% of all households in the U.S. for the 1980 Census of Population and Housing. Sample data contains information on income, employment, education, handicap status, ancestry and other areas not covered by the complete count data.

SPANISH ORIGIN

"Spanish origin" is considered an indication of ethnicity, not race. ("Origin" and "descent" are used synonomously with ethnicity.) Thus, respondents may identify themselves as belonging to any of the race categories listed above (see RACE) in addition to being of Spanish origin. For example, individuals may be both Black and of Spanish origin. Like race, Spanish origin was self-identified by respondents. For those wishing to compare Spanish origin between the 1970 and 1980 censuses, it is important to note a number of differences; in particular, Spanish heritage, Spanish language and Spanish birth were used by the Census Bureau to identify the Hispanic population in 1970, in conjunction with self-identification by respondents. In addition, those persons who placed themselves in the "other" category and wrote in Cuban, Mexican, Puerto Rican or other Spanish/Hispanic origin were placed in the "White" racial category in 1970, but left in the "other" category in 1980. To approximate the 1970 racial groupings, the 1980 "other" Spanish count should be added to the "white" count.

SMSA

Standard Metropolitan Statistical Area. Most SMSA's in the country consist of a city of 50,000 or more inhabitants and the county or counties in which it is located. In New England, however, SMSA's are defined in terms of cities and towns, not counties.

STF

Summary Tape File. Computer files of data from the 1980 Census of Population and Housing. There will be five Summary Tape Files in all - STF's 1 and 2 consist of complete count data, and STF's 3, 4 and 5 consist of sample data. Each STF is further divided into 3 subcategories (A, B and C) representing different levels of geography. Thus, STF 1A and STF 1B contain the same 59 tables of data, but for different geographic units. In most instances, the C files are for national level data.

SUPPRESSION

Tabulations of data for very small groups of people or housing units are suppressed by the Census Bureau to maintain confidentiality. Several basic counts are never suppressed: total population, total housing units, year-round housing units, occupied housing units, vacant year-round housing units and the count of persons and households in each race or Spanish origin group. Other data, however, are suppressed when the number of persons or housing units in a particular geographic area is low enough to identify individuals - below fifteen persons or five housing units. For example, if there were only one person of Asian race in a town all data tabulated for the "Asian" category other than the basic totals above would appear as a zero. Therefore, a zero may reflect an actual count of zero or it may indicate that the data has been suppressed. In some cases data are suppressed in more than one cell to prevent the derivation of suppressed data by subtraction; this is called "complementary suppression." In most cases, suppressed data values are small enough that users may ignore suppression and treat suppressed cells as zero cells. For those working with small geographic areas, however, ignoring suppression can result in a downward bias in the totals. To determine whether a zero in any of the 59 tables in this volume represents suppressed data or an actual count of zero, contact the Center for Massachusetts Data (413-545-0176).

TENURE

The classification of all occupied housing units as either owner-occupied or renter-occupied.

TRACT

Statistical areas averaging about 4,000 in population. Counties in SMSA's are all divided into census tracts. In addition, 252 counties outside SMSA's are "tracted," and five states are entirely divided into tracts: Connecticut, Delaware, Hawaii, New Jersey and Rhode Island. All of the counties in Massachusetts except Barnstable, Dukes, Franklin and Nantucket are tracted.

UNIVERSE

Unit of observation for each table of data. In STF 1, there are four types of universe: person, households, housing units and families. The universe for any given table may be more specific than these four basic categories, however; for example, the universe in Table 10 is "persons," meaning all persons, while in Table 13 the universe is limited to "persons of Spanish origin."

IMPORTANT --- CORRECTIONS TO BOOK "Massachusetts Population & Housing Characteristics"

Please note the following corrections:

p. 109...Belchertown - a corrected sheet has been supplied for this page. (the book carries the data for Belchertown CDP, census designated place, and the corrected page gives the data for Belchertown MCD, minor civil division.)

p. 355...Lancaster - both pages for Lancaster have been replaced by a correction sheet.
p. 356 (the book carries data for Lancaster CDP, census designated place, and the correction pages give data for Lancaster MCD, minor civil division.)

Note.....On census microfiche, and microfiche blowbacks, a dash (-) indicates an actual count of zero, and three dots (...) indicates suppressed data. This was not noted on page 19, "Suppression."
